

Instructions for simulated fire extinguishment and smoke evacuation equipment

1. Instructions for simulated fire extinguishment equipment

- Remove the safety pin.

The pin must be totally removed before the extinguisher can be activated. Hold only in the lower handle when pulling the pin to avoid locking the pin in the handle. The tamper seal may hold the pin in place so pull hard to remove the pin.

- Aim nozzle at base of fire.

Hold the hose firmly close to the nozzle. Aim at the base of the fire from 2~4 meters away and not the smoke and flames.

- Squeeze the handle.

Activate the extinguisher by squeezing the handle all the way down. Hold the nozzle firmly. The extinguisher must be held vertical for best performance.

- Sweep from side to side.

Chase the flames, move the hose from side to side while aiming at the base of the flames. If the fire is big start at the base and then move up and extinguish the rest of the fire.

2. Instructions for simulated smoke evacuation equipment

- Keep calm and conceive the escape route.
- Bend down to stay low.
- Walk along the wall to avoid losing your way.
- Observe safety exits and signs.
